

# Release Plan: UCSC Plaza

**Team Amlesh the Great**  
Kyungmin So (PO), Youngsoo Jang,  
Hobin Ryu, Seungwoo Lee  
Amlesh Sivanantham, and James Garbagnati

Release: American Bobtail (July 5, 2016)  
Revision 0.0 (July 5, 2016)

## High Level Goals

- Create a basic event manager and advertiser for the UCSC community.
- Visualize locations of events using Google maps API.
- Search functionality to find events happening within campus.
- Give users the ability to rate and comment to leave feedback on events.
- Suggest similar events to users based on their personal preferences.

## User Stories for Release

### Sprint 1

- (5) User Story 1: As a member of the UCSC community, I want to be able to log in to an unique account made for me, so that I can use the application “UCSC Plaza.”
- (3) User Story 2: As an event planner, I want my event to be shown to members of the UCSC community, so that I can advertise strictly to UCSC members.
- (8) User Story 3: As an event planner, I want to add or delete my events, so that other members of UCSC can see if my event is available.
- (5) User Story 4: As an event-goer, I want to see a map of the UCSC campus, so that I know where events are planned to happen.
- (3) User Story 5: As an event-goer, I want to be able to see details of an event, so that I can decide whether I want to attend or not.

## Sprint 2

- (5) User Story 1: As an event planner, I want to be able to manage my event, so that I can apply certain constraints to the event.
- (3) User Story 2: As an event-goer, I want to be able to send or rescind an application to a specific event, so that the event planner knows whether I plan to attend or not.
- (3) User Story 3: As an event planner, I want to see who applied to my event and be able to accept or decline their application, so that the event goers know if they are allowed to partake or not.
- (5) User Story 4: As an event-goer, I may wish for privacy settings, so that I can ensure that my event-attendance is not seen by the public.
- (8) User Story 5: As an event-goer, I want to be able to search for specific events, so that I may apply to attend the event.

## Sprint 3

- (5) User Story 1: As an event-goer, I want to see the current and maximum attendance for the event, so that I can ensure there is space for me to attend and that it is not overcrowded.
- (5) User Story 2: As an event-planner, I want to ensure that my event does not exceed maximum attendance, so that my event is not overcrowded and has enough room for all event-goers.
- (3) User Story 3: As an event-goer, I want to be able to see and submit my own rating for an event, so that I can decide to go to an ongoing event or offer my opinion towards the event.
- (3) User Story 4: As an event planner, I want to get some feedback on my event, so that I can improve the experience of my event.
- (8) User Story 5: As an event-goer, I want to be able to socialize over an event, so that I can share my opinion with friends and other participants.
- (21) User Story 6: As an event-goer, I want to be able to see if my friends are going to a certain event, so that I know which events have my friends in it.
- (13) User Story 7: As an event-goer, I want to receive recommendations on other events tailored to my preference, so that I can see events that I may attend in the future.

## Product Backlog

The main feature we did not believe we would be able to complete within the three sprints is Facebook integration for better polish and easier access to information. This feature also goes in hand with the User Story 6 from Sprint 3.
